

Narration Scripts

Long-Form Voice-Overs for Animated & Creative Video

Christine — these are your cinematic narrations. Each one is written to flow with animated visuals, motion graphics, or nature footage. Read them slowly, with feeling. Let the pauses breathe. We'll build the visuals around your voice.

Recording Notes

- **Pace:** Slower than conversation. Think documentary narrator, not news anchor.
- **Tone:** Warm, reflective, full of wonder. You're inviting someone into a moment, not selling them something.
- **Pauses:** Where you see [beat] or [pause] — take a full breath. These gaps let the visuals land.
- **Emphasis:** Words in **bold** in the scripts are meant to carry a little extra weight in your delivery.
- **Multiple takes:** We'll record each narration 2-3 times. Don't worry about perfection on take one.

1

The BEHOLD Manifesto

The heart of the book in 90 seconds | ~90 sec | Animated brand film

[VISUAL: Slow aerial shot pulling back from a single leaf to a vast forest canopy. Golden light.]

There is a word that changes everything.

[beat]

Behold.

[beat]

Not glance. Not scroll past. Not acknowledge and move on.

To behold is to stop. To give something your full, unhurried attention. And to let what you see — **change you**.

[pause — visual shift to microscopic cell division]

Every detail of creation is a reflection of the Creator's character. His design. His love.

The twenty thousand breaths you take today — each one a gift from the Breath-Giver. The immune system patrolling your body right now — an army He designed to protect you. The forces holding every atom together — His hand, sustaining all things.

[beat — visual: salmon leaping upstream]

From the chemistry of solutions to the journey of the salmon. From the science of sleep to the forces that hold the universe together. Every discovery in science is a discovery about God's mind.

[beat]

We're not asking you to choose between faith and science.

We're inviting you to see them as two languages — describing the same **profound reality**.

[pause — visual: book reveal with golden light]

BEHOLD — Captivated by the God of Creation.

Start seeing. Start wondering. Start beholding.

2 The Salmon Run

Study 14: God of the Journey | ~2 min | Animated short / nature montage

[VISUAL: Underwater footage or animation: a lone salmon in the deep blue ocean, then a school forming, turning toward shore.]

Every fall, one of nature's most extraordinary dramas unfolds in the rivers and streams of the Pacific Northwest.

[beat]

Salmon — some weighing up to fifty pounds — abandon the comfort of the ocean and begin swimming against the current. Fighting their way upstream. Toward the rivers where they were born.

[beat — visual: salmon hitting rapids, leaping]

The odds are staggering. They stop eating almost entirely. Their bodies begin to deteriorate. They leap against rushing waterfalls — sometimes falling back — only to try again.

Predators hunt them. Bears standing in rivers. Eagles diving from the sky. Disease attacks them. Yet they persist. They struggle. They sacrifice **everything** to reach their destination.

[long pause — visual: a single salmon, battered, still swimming]

I can't think of a more powerful picture of the Christian life.

[beat]

We live in a world that flows one direction — toward ease. Toward comfort. Toward the path of least resistance. The current of culture pulls us constantly downstream.

But the Christian is called to swim upstream.

Christ said: 'If anyone would come after me, let him deny himself, take up his cross, and follow me.' The cross was an instrument of death. He's calling us to die to ourselves. To our comfort. Our reputation. Our safety.

[beat — visual: salmon reaching calm water, spawning grounds]

The salmon never sees the offspring it creates. It dies in the process of bringing them to life. Yet its pattern — its design, its identity — continues.

When we follow Christ wholeheartedly — when we swim against the current of culture — we leave a legacy we may never fully see. The person we witness to might not believe until years later. The example we set might shape someone's grandchild.

[beat]

The struggle is not evidence that you're on the wrong path.

It's proof that the destination matters.

[visual: water settling, sun breaking through trees]

May we have the courage of the salmon.

3 The Dance Partners

Faith and science as allies | ~75 sec | Motion graphics / explainer

[VISUAL: Split-screen animation: one side shows a church steeple, the other a microscope lens. They slowly merge into one image.]

For a long time, people told me I had to choose.

[beat]

Science or faith. The textbook or the Bible. The classroom or the church. As if they lived in separate rooms and could never meet.

I was fourteen when I first felt that tension. My biology teacher explained photosynthesis — this elegant chain of chemical reactions that turns sunlight into life. And my youth pastor said God made the plants for us.

[beat]

I thought I had to pick a side.

It took me years to understand — they were asking **different questions** entirely.

[visual: animated text — 'HOW' and 'WHY' appearing on screen]

Biology answers the **how**. Scripture answers the **why**. And when you study both seriously — they don't contradict.

They illuminate each other. With stunning clarity.

[VISUAL: Visual montage: DNA helix, galaxies, a child's hand touching a flower, an open Bible.]

God made a world layered with complexity — fractal patterns and beauty at every scale. From the spiraling arms of galaxies to the double helix of DNA to the intricate symmetry of a snowflake.

[beat]

Why would He do that — unless He wanted us to explore? To discover? To **wonder**?

Science and faith were never enemies. They're dance partners — in the same grand cosmic narrative.

[visual: book reveal]

And that's the story BEHOLD was written to tell.

4

The Breath-Giver

Study 10: The miracle of respiration | ~75 sec | Animated devotional

[VISUAL: Close-up animation: lungs expanding, oxygen molecules crossing alveoli membranes. Warm, golden interior light.]

Take a breath.

[3-second pause — let the viewer actually breathe]

You just did something extraordinary. And you didn't even think about it.

Twenty thousand times today, your lungs will expand. Oxygen will cross a membrane thinner than a soap bubble. It will bind to hemoglobin in your blood — each molecule carrying exactly four oxygen atoms, no more, no less — and travel to every cell in your body.

[beat — visual: red blood cells flowing through vessels]

Your cells will use that oxygen to create energy. And in return, they'll release carbon dioxide — which will travel back to your lungs and leave your body on the exhale. A perfect exchange. A silent partnership that has been running since the moment you were born.

[beat]

You didn't design this system. You can't improve it. You don't even have to remember to do it.

Because someone else set that rhythm in motion.

[VISUAL: Visual shifts: from the microscopic to wide — a person breathing in a sunlit meadow.]

Genesis tells us that God formed man from the dust of the ground — and **breathed into his nostrils the breath of life**. That wasn't a one-time event. It's happening right now. In you.

[beat]

Every breath is a provision. Every inhale — a gift. Every exhale — a quiet act of trust.

The God who gives you breath — has not stopped giving.

5

The Refiner's Fire

Study 13: Pressure, heat, and purity | ~70 sec | Animated devotional

[VISUAL: Dark screen. A single flame appears. Then molten gold pouring into a crucible. Heat waves rising.]

Gold doesn't start beautiful.

[beat]

When it comes out of the earth, it's tangled with rock and dirt and impurities. It doesn't look like anything valuable. It looks like rubble.

To become what it's meant to be — it has to go through fire.

[beat — visual: gold melting, impurities rising to the surface]

The refiner heats the metal to over a thousand degrees. At that temperature, everything that isn't gold rises to the surface. The dross. The impurities. The things that don't belong. And the refiner skims them away — carefully, patiently — until all that remains is pure.

[beat]

Here's what struck me when I learned this in my chemistry class:

The refiner knows the gold is ready — when he can see his own reflection in it.

[long pause — let that land]

[VISUAL: Visual: molten gold becomes still, mirror-like. A face is reflected in it.]

That's what God is doing with you.

The pressure you're feeling. The heat you're walking through. The things being stripped away that you thought you needed.

He's not punishing you. He's not angry with you. He's refining you — until He can see **His own image** reflected in your life.

[beat]

And He won't stop. Because He knows what you're becoming.

6

Raising Wonder

Webinar series promo for parents | ~75 sec | Animated promo / launch video

[VISUAL: Warm kitchen scene — animated. A parent and child at a table. Then: a backyard, a park, stars at night.]

You're already doing it. You just might not realize it yet.

[beat]

Every time your child asks why the sky is blue — that's a creation classroom. Every time they watch ants build a trail across the sidewalk — that's God's design on display. Every time they mix baking soda and vinegar at the kitchen table and their eyes go wide — that's wonder. And wonder is the doorway to worship.

[beat — visual: montage of everyday moments becoming magical]

But most parents feel stuck. You want your kids to love science — but you worry about the questions it raises. What about evolution? What about the Big Bang? What do I say when my child comes home from school and says, 'My teacher told us there's no God'?

[beat]

You don't need a lab coat to answer those questions. You don't need a degree in theology. You need a framework. A way to hold science in one hand and Scripture in the other — and show your children they were always meant to go together.

[visual: Christine appearing on screen, warm, smiling]

That's what Raising Wonder is.

After twenty-five years of teaching science to other people's children — I'm bringing those same lessons to your family. Eight episodes. Practical. Warm. Rooted in real science and real faith.

Because the most important science teacher your child will ever have — is you.

7

BEHOLD! Science Lab

Webinar series promo for students | ~70 sec | Animated promo / launch video

[VISUAL: Animated: a student opens a textbook. The pages come alive — molecules spin, cells divide, galaxies form.]

What if your science class could show you something bigger?

[beat]

Not just how things work — but **why they exist**. Not just the facts — but the fingerprints of the One who designed them.

[beat — visual: entropy animation, order emerging from chaos]

Why does ice melt? Why do rooms get messy? That's thermodynamics — and it reveals a God who brings order from chaos.

How does your immune system know which cells to attack and which to protect? That's immunology — and it's a picture of how God equips you for battle.

What makes a salmon swim a thousand miles upstream to die? That's biology — and it's the most powerful picture of sacrifice you'll ever see.

[visual: Christine in a classroom setting, engaging, alive]

I spent twenty-five years teaching students to see these connections. Now I'm bringing that classroom to you.

BEHOLD! Science Lab — ten lessons in real science. Real faith. Real wonder.
With hands-on experiments, a student workbook, and the kind of teaching that makes you want to learn more — not less.

[beat]

For students who are ready to behold.

8

The God Who Fills All Things

Study 20: From atoms to galaxies | ~90 sec | Animated closing / brand film

[VISUAL: Zoom sequence: starting inside an atom — electrons orbiting — then pulling out through molecules, cells, a body, a city, the planet, the solar system, the galaxy.]

Inside the smallest atom, there is space.

[beat]

If an atom were the size of a football stadium, the nucleus would be a marble on the fifty-yard line. The rest — is empty.

And yet — it holds together. Something invisible sustains it. Something you cannot see — keeps the electrons in their orbits, the protons bound, the neutrons steady.

[beat — visual: zoom outward through molecular structures]

Now zoom out. Past the molecule. Past the cell. Past the tissue and the organ and the body and the city and the continent.

Past the atmosphere. Past the moon. Past the sun.

[visual: accelerating through space]

Between the stars — there is space. Between the galaxies — unimaginable emptiness. The universe is almost entirely nothing.

And yet — it holds together.

Colossians tells us: 'In Him all things hold together.' Not some things. Not the important things. **All things.** From the smallest atom to the largest galaxy — God fills every empty space.

[long pause — visual: zoom stops. Stillness. Stars.]

He fills the space between your atoms. He fills the silence between your prayers. He fills the gap between your fear and your faith.

[beat]

He is the God who fills all things.

And He is filling you — right now.

[visual: book reveal, warm golden light]

BEHOLD — Captivated by the God of Creation.

9 The God Who Fills Us

Study 20: He fills every empty space — including you | ~2.5 min | Animated feature / keynote film

[VISUAL: Slow fade in. An empty room. A single chair. Dust drifting through a shaft of light. Silence.]

Have you ever felt it?

[beat]

That hollow. That space inside you that nothing seems to reach. You've tried to name it. Loneliness, maybe. Or restlessness. Or that quiet ache at the end of a full day — when everything went right — and something still feels missing.

[beat — visual: the room begins to dissolve into particles, atoms]

You're not imagining it. That emptiness is real.

And here's the extraordinary thing — it exists at every level of creation.

[beat]

[VISUAL: Zoom into the atomic level. A nucleus surrounded by vast space. Electrons orbiting far away.]

Inside the smallest atom, there is space. If you enlarged an atom to the size of a football stadium, the nucleus — the solid part — would be a marble sitting on the fifty-yard line. The electrons? Tiny gnats circling the upper deck. Everything between? Empty.

[beat]

Your body is made of trillions of these atoms. And every single one of them is almost entirely nothing.

Which means — by the math alone — you are more emptiness than substance.

[long pause — let that settle]

[VISUAL: Pull back. Atoms form molecules. Molecules form cells. The view expands through tissue, organs, a beating heart.]

And yet you hold together. You breathe. You think. You feel. Something sustains every particle of your being — something you cannot see and cannot measure.

[beat]

Paul wrote to the Colossians: 'He is before all things, and in Him all things hold together.'

Not some things. All things.

[beat — visual: zoom continues outward. A person standing in a field. Then the city. The continent. The planet.]

Now zoom out further. Past the atmosphere. Past the moon and the planets. Past the sun. Between the stars — there is space. Between the galaxies — distances so vast the human

mind cannot hold them. The universe is ninety-nine point nine nine nine percent empty.

[beat]

And yet — it holds together too.

The same God who sustains the space inside an atom sustains the space between galaxies. He fills every void. Every gap. Every emptiness.

[visual: zoom slows. Stops. Stars everywhere. Stillness.]

And He is not done.

[VISUAL: Visual shift: back to the person. Close-up. A hand on their chest. Breathing.]

Because the same God who fills atoms and galaxies — wants to fill **you**.

[beat]

That ache you carry? He made it on purpose. Not to torment you — but to draw you. Augustine called it a God-shaped vacuum. Pascal called it an infinite abyss. Science calls it empty space.

God calls it an invitation.

[beat]

Ephesians tells us that God is able to do 'immeasurably more than all we ask or imagine, according to His power that is at work within us.' Not around us. Not above us. **Within** us.

[beat]

He fills the silence between your prayers — with listening. He fills the gap between your doubt and your faith — with patience. He fills the space between who you are and who you were made to be — with grace.

[long pause — visual: warm golden light begins to fill the frame from the center outward]

The world will try to fill you with noise. With ambition. With distraction. With things that glitter but do not last.

But there is only one thing that was designed to fill that space.

[beat]

Him.

[beat]

From the nucleus of the atom to the edge of the universe — He is the God who fills all things.

And He is filling you.

Right now.

[visual: golden light fills the entire frame. Then slowly — the book cover emerges.]

BEHOLD — Captivated by the God of Creation.

That's 9 narrations. Take your time with each one. We'll build something beautiful around your voice.
